

## Software Integrity Equals Business Integrity

We live in a world where the integrity of your business and your competitive advantage is directly dependent on the integrity of your software. Companies understand that investing in the integrity of software can dramatically reduce costs associated with product delays and recalls, enhance business agility, and dramatically improve developer time spent on innovation.

*The Coverity Integrity Center allows companies to identify and eliminate software problems throughout the software development lifecycle.*

### Ensuring Software Integrity

The Coverity Integrity Center helps companies reduce product failures and recalls caused by software problems, to make software changes faster and with less risk, and to achieve breakthroughs in product innovation through highly efficient development.

The Coverity Integrity Center provides a full set of precision software analysis capabilities in a single solution. This combination enables customers to identify and eliminate the root cause of software problems during the design, code, build, and test phases of software development. Whether an organization uses agile or waterfall methodology, or works from centralized or highly distributed development environments, the Coverity Integrity Center can help companies deliver high integrity software.

To date, Coverity has discovered more than one million software quality, security, and performance flaws before deployment, saving more than 600 customers over \$250 million annually. The world's leading medical device, networking, consumer electronics, robotics, transportation, military equipment, business application, semiconductor, and gaming companies trust Coverity to drive business integrity.

Join the growing list of companies that produce high integrity software with Coverity Integrity Center.

## Eliminate Software Problems That Can:

- Freeze product rollouts
- Trigger product recalls
- Sink developer productivity
- Tarnish your market reputation

### Quality & Performance

Lower development and maintenance costs 32% by addressing defects early in the lifecycle

### Risk & Change

Prevent product recalls and security vulnerabilities by detecting 30% of field defects before shipping software

### Productivity & Agility

Reduce development efforts 15% and focus resources on delivering features and innovation

### Compliance & Standards

Meet stringent best practice, industry, and government standards

### Automate Compliance with Standards Such As:

- IEC 62304
- ISO14971
- DO 178B
- FDA Software Validation Guidelines
- OWASP
- CWE/SANS Security Weaknesses
- PCI
- MISRA
- Sarbanes-Oxley

## Precision Software Analysis™

Coverity Integrity Center delivers value across every stage of software development—design, development, assembly and test—enabling customers to address problems before they impact the business.

- **Architecture Analysis:** Analyze software design to ensure changes can be made with less risk and components can be easily reused for maximum business agility. Use architectural visualization to identify hidden security backdoors that can cause costly breaches and data losses.
- **Static Analysis:** Analyze source code for defects that can cause product delays or recalls. Expose security flaws early in the lifecycle so security audit teams don't slow developers with expensive rework or slow them from working on product innovation.
- **Build Analysis:** Analyze software builds to identify problems and inefficiencies in the assembly of software that can cause costly product delays. Ensure that all open source components in the final product are documented and secure.
- **Dynamic Analysis:** Analyze applications as they execute in test environments to identify complex multi-threaded concurrency defects and other crash causing software problems that can cause major delays in testing and delivery time.

## Who Uses Coverity?

Coverity is the trusted standard for companies that have a zero tolerance policy for software failures, problems, and security breaches. More than 600 of the world's leading companies are using Coverity's precision software analysis to drive business results. These companies are leading providers of sophisticated software products and services:

<b>Business devices</b>	Carrier grade telecommunications, wireless infrastructure, networking, security, storage
<b>Mission critical devices</b>	Medical, military, aerospace
<b>Consumer devices</b>	Mobile communications, consumer electronics
<b>Engineering applications</b>	Computer Aided Design (CAD), Computer Aided Manufacturing (CAM)
<b>Business applications</b>	Security software, data management, storage management
<b>Gaming applications</b>	PC games, console games
<b>Operating platforms</b>	Real-time operating systems, mobile operating systems, server operating systems
<b>Gaming platforms</b>	Console gaming, casino gaming

## Contact Coverity To Learn More

Learn more about how Coverity can help you prevent product recalls, improve developer productivity, and increase software integrity. Contact us today to arrange an online demonstration of the Coverity Integrity Center or to see if you qualify for our free trial offer. No changes to your code are necessary, there are no limitations on code size, and you will receive a complimentary report detailing actionable analysis results.

### About Coverity

Coverity ([www.coverity.com](http://www.coverity.com)), the software integrity company, is the trusted standard for companies that have a zero tolerance policy for software failures, problems, and security breaches. Coverity's award winning portfolio of software integrity products helps customers prevent software problems throughout the application lifecycle. Over 100,000 developers and 600 companies rely on Coverity to help them ensure the delivery of superior software. Coverity is a privately held company headquartered in San Francisco with offices in 6 countries and more than 150 employees.
